

Standby Generators

Call 1-800-342-0878

Residential needs have never been so great as homeowners depend more and more on electrical power. Ice storms, hurricanes, utility power deregulation, and other natural and man-made disasters, all threaten your electrical service.

What is a Standby Generator?

A standby generator is a backup power device that operates on your home's existing fuel source, whether it be natural gas or liquid propane. Diesel powered generator sets are also available. It is permanently installed outdoors, much like an air conditioning unit. The generator system will automatically start and transfer loads on a power outage. When utility power returns, the generator system will automatically shut down.

Why use PWR?

- PWR provides a full line of generator sets to meet your individual power needs.
- We provide a single source solution. There is no need to call a plumber, or an electrician. We are certified, qualified, and insured to do it all.
- An on staff Electrical Engineer to address any questions you may have.
- A dependable Service Department to respond to emergencies and maintenance requirements
- **Free in home estimate** for our residential customers.
